

MARKET INTELLIGENCE & EDUCATION TERMINAL

CLEAR PATH

TRADER

Charts first. Less noise. Education before risk. A terminal built so different minds can actually read the market — not fight the interface.

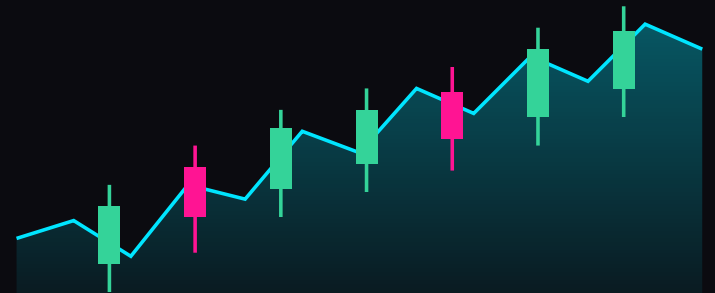

NOT A BROKERAGE

NOT FINANCIAL ADVICE

NEURODIVERGENT-FIRST

clearpathtrader.com

ILLUSTRATION · CHART-FIRST DESK

THE RULE

Knowledge before execution.
Understanding before risk.
Clarity before decisions.

Financial education should adapt to people — not the other way around.

Most trading software is designed to keep people clicking. ClearPath Trader was built so the chart stays the center of attention, and the rest of the desk can be parked until you ask for it.

The manifesto

Some people see patterns.
Some people need structure.
Some people learn visually.
Some people become overwhelmed by cluttered screens, endless indicators, and information overload.

Before risking capital, understand the system.
Before following signals, understand the logic.
Before chasing markets, understand the relationships.

FOUNDER QUESTION

“What if I built the trading platform my own brain actually needed?”

Richard A. Floyd · Founder & CEO

Built from need

Autism, ADHD, and TBI shaped the product. Flashing widgets and stacked alerts were not “engagement.” They were exhaustion. The durable asset is the terminal — not a personal brand, not casino hype.

What this is not

- Not a broker. No order tickets. No customer funds.
- Not financial advice or trade signals.
- Not a website chatbot that books appointments.
- Not aiclearpath.com — different company.

Four desks. Same honesty. Different minds.

First visit is chart-first: the plot uses about 70% of the screen. News, calendars, alerts, education, and research start in the Held file — restore any bento when you want it. Study desks, not brokerage.

[/desk/institutional](#)

Institutional Trader

Give me the information

Bento command center: global ribbon, universe, flow, liquidity, time & sales, structure, volume, volatility, options, correlation, macro, news, calendar, positioning, risk, earnings.

COT from official CFTC.gov — not invented. Missing vendor cells stay blank.

[/desk/fundamental](#)

Fundamental Trader

What is this business doing financially?

Research workstation: identity, business model, multiples, revenue, profitability, cash flow, balance sheet, earnings, capital allocation, peers, geo mix, macro mapping, filings, company news, management.

[/desk/retail](#)

Retail Trader

Make trading understandable

Large chart, watchlist, pattern scanner, market snapshot, movers, news, economic wire, alerts, "what changed," structure glossary (BOS / CHoCH / FVG), simulation lab. Plain language over jargon.

[/desk/neurodivergent](#)

Neurodivergent Traders

Built for different minds. Made for real traders.

Calm retail + crypto workstation with sensory profiles (calm focus, ADHD, autism-predictable, low-stim, and more). Profiles change look and density — never the market data.

The chart is the product. Everything else is optional.

Live workspace

- Lightweight Charts canvas engine — panels open fast, stay smooth.
- Stocks, forex, crypto, commodities on one combined server.
- Drawing tools: basic on Basic; full set from Silver up.
- Gold Bar (ATR trailing example) on Silver+.
- Pattern overlay on Gold+. AI pattern scanner on Platinum (rolling out).
- INDACREATOR: paste or upload Pine Script, compile, apply to charts.
- River Genie co-pilot writes Pine in the workstation — you still compile it.
- Multi-monitor Screens menu to pop panes onto other displays.

Indicators — honest caps

Most platforms invent a low cap. ClearPath follows the membership sheet:

Basic 5 (SMA, EMA, RSI, MACD, Volume) · **Silver 15** · **Gold & Platinum: all supported indicators**, no extra artificial limit. Candle history is vendor-capped (Twelve Data, 5,000 bars) even when the sheet says “unlimited years.”

NEURO-ADAPTIVE CHART PROFILES · /UI

Thirteen looks. Same data.

Optional visual comfort modes — not medical treatment. Switch live on Charts. Remembered for later sessions when possible.

CALM FOCUS

LOW STIMULATION

READING SUPPORT

NUMERIC RELIEF

VISUAL EASE

REDUCED SIGNAL LOAD

TASK STRUCTURE

LARGE TARGET MODE

BALANCED ENERGY

HYPERFOCUS

AUTISM — PREDICTABLE

MINIMAL MOTION

STANDARD RED & GREEN

Blackout mode, custom dashboards, and no-ads arrive on Silver+. Explain Mode adds a cinema-style overlay next to each tab — extra understanding, never a trade call.

From first chart to a full literacy OS.

ClearPath Education

/education

Schools → unlocked units → lessons → quizzes. Pass to open the next unit. Plain language, everyday comparisons. Curriculum includes methodology ideas such as Four Up, Three Down — taught with patience, not hype.

Encyclopedia of Finance

/encyclopedia

Deep library across stocks, forex, crypto, commodities, companies, events, and market relationships. Built as a visual learning environment — thousands of educational URLs, not a signal feed.

Encyclopedia of Indicators

/indicators

Filterable cards: what it is, the formula, how to read it, limitations, typical settings. Live-overlay badge when the model can sit on Charts. Study articles — not advice.

Literacy OS · /literacy

A personal market-science desk: archive, verify, and study. Education only.

TRUTH SEARCH

MENTOR TRUST

STUDY COACH

IDEA PINS

PATTERN STUDIO

C.P.T. Buddy

In-terminal mentor — pink avatar, always there. Looks up live prices, COT, the open chart, and encyclopedia entries instead of guessing. Platonic, calm, no sales widget on someone else's homepage.

If a vendor cell is missing, it stays blank.

ClearPath does not invent COT, IV, GEX, Level II, or timed CPI/NFP rows. Labels tell you the source. "DATA UNAVAILABLE" is a feature.

News wire

Live headlines on desks. Rate-limits are labeled as the vendor (e.g. NewsData), not as a COT failure.

Positioning / COT

Official CFTC.gov via `/api/cot/history`. Example map: XAUUSD → GC → 088691. Chips: CACHED · CFTC FETCH · NO CFTC MAP · PROVIDER ERROR.

Macro / FRED

Policy and inflation series when a FRED key is configured on the server. Client-supplied keys are rejected.

Economic wire

Calendar panels are a headline wire — not a fabricated timed-release grid. Empty beats stay empty.

Also in the terminal

- Y.W.C. — Yours / World / Community hub
- Social Media Hub (Silver+, rolling out)
- Affiliate Network — every private account gets `/r/CODE`
- Paper trading / Simulation Lab (hypothetical only)
- Position-size calculator · `/tools/position-size`
- Alerts & watchlists (plan-capped)
- Sentinel — platform integrity checks, not signals
- Regional hubs: RU · CN · JP · PH
- Glossary, guides, FAQ, accessibility statement
- Web + Android (PWA / APK) with consent-first updates
- Market Replay — on the Silver+ roadmap
- Bots — Platinum, rolling out

SPEED

One combined service: market data and the terminal share a pipeline. No chain of third-party iframes. Server-side candle cache keeps repeat loads snappy. Result: the UI stays responsive while you work.

Four plans. One catalog. No invented prices here.

Feature	BASIC	SILVER	GOLD	PLATINUM
Charts per window	1	4	10	Unlimited
Indicators	5	15	All	All
Drawing tools	Basic	All	All	All
Alerts	3	Unlimited	Unlimited	Unlimited
Watchlists	3	8	15	Unlimited
Intraday charts	Daily+	Yes	Yes	Yes
Neuro-divergent layouts	Yes	Yes	Yes	Yes
Paper trading · real-time news	Yes	Yes	Yes	Yes
No ads · blackout · education · encyclopedia	—	Yes	Yes	Yes
Gold Bar · affiliate · custom dashboard	—	Yes	Yes	Yes
Pattern overlay · INDACREATOR	—	—	Yes	Yes
AI pattern scanner · bots	—	—	—	Rolling out
Market replay	—	Roadmap	Roadmap	Roadmap

A safer place to learn. A clearer place to think.

ClearPath Trader is the product of one trader’s need for a desk that does not shout. It is still being refined. The standard is simple: if a feature does not help someone understand the market better, it does not belong.

LEGAL, IN PLAIN ENGLISH

This document describes education and market-intelligence software. It is not an offer of brokerage, not a solicitation to trade, and not personalized investment advice. Past charts and illustrations are decorative. Live data depends on configured vendors. Empty cells mean the data is not there — we will not fill them in for you.

The problem isn’t the person.
The problem is the software.
